

The friendly and professional approach the staff take, also helps people to feel comfortable, and Denise is keen to make sure that people do not feel embarrassed about their problems. “We are just ordinary women here, mainly in our forties, and we don’t want people to feel intimidated about coming in,” she says. The clinic can also boast many pharmaceutical cosmetic products which can only be administered by trained professionals, such as anti-aging Medik8 and pure retinol creams — which are far more effective than their High Street versions.

The treatments on offer carry almost no risk and trained staff always take a patch test to ensure the person is not allergic to any of the ingredients. While the Beauty Spot is Denise’s first experience of providing aesthetic treatments, she says that she is extremely pleased with the positive results they produce and is usually just as happy as the client when the treatment is complete.

She said: “You just cannot put a price on looking and feeling good — I have had women leaving here crying because they are so happy and that makes me feel great. It really boosts their confidence and some have gone on to change their careers and their lives. We are able to guarantee that we will get results and people are amazed when they see the improvements.

The Call of Beauty

The Beauty Spot is now offering the following revolutionary cosmetic procedures:

- ▶ Veinwave therapy can be used to treat cosmetic problems such as red veins, spider veins and rosacea in a painless and effective way without the use of needles. It is the latest addition to the clinic and one of the most popular treatments in the US. It is the only machine of its kind in Mansfield.
- ▶ Laser teeth whitening where a whitening gel is applied to the teeth, which is activated by a laser that causes the peroxide to penetrate the enamel producing a white shine. A maximum of six 10-minute applications is all that is required for an A-list smile.
- ▶ Semi-permanent lash extensions available in a variety of colours and lengths which allow the wearer to swim, shower and exercise without worrying about them falling out. A set

of lashes take around two hours to fit and do not affect the growth of natural lashes. They can be removed at any time by a salon technician.

- ▶ Eporex mesotherapy is a targeted, non-invasive treatment which can be used for a number of conditions such as cellulite, stretch marks and tired eyes.

In addition, clients can benefit from treatments such as permanent make-up tattoos, cellulite reduction, targeted fat reduction, acne and anti-aging treatment, hair removal, spray tans and many more. ■

- **Perfectly pampered** - The Beauty Spot Cosmetic Clinic provides a range of procedures including a teeth whitening service (top right) and veinwave therapy.
